

Façade Design Pattern

Lecture notes

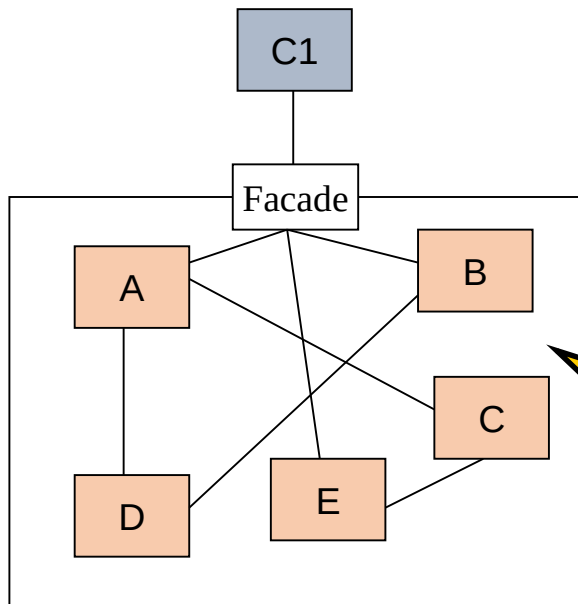

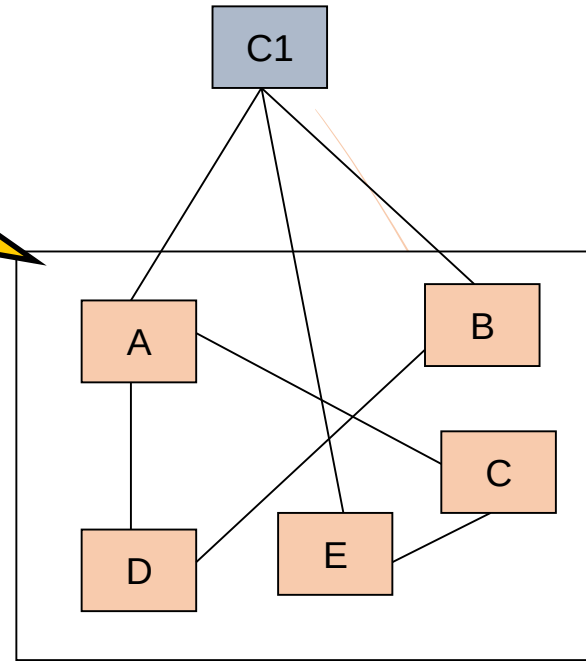

Façade: motivation

- Provide a high-level interface to facilitate the use of lower-level functionality
- Minimise communication and dependency between systems

Façade: in practice

When a component (e.g. Cx) uses many components within a different subsystem (e.g. A-E), it has too much intimate knowledge about the subsystem

A façade removes the intimate knowledge of the subsystem from the client

- The client is simpler
- The client has fewer dependencies
- The client is cleaner

Activity

Coding

- Review the example code and watch out for:
 - where the project with patterns might benefit from the use of a façade
- If you have any questions, ask

Project: `LectureExample_WithPatterns`
